

TRENDS MART CASE STUDY

TrendMart is a retail & e-commerce lifestyle brand aiming to personalize marketing strategies. They have collected both **quantitative** (demographics, shopping behavior) and **qualitative** (goals, challenges, lifestyle) customer data.

The marketing team wants to group customers into distinct personas to:

1. Target promotions effectively
2. Choose the right communication channels
3. Improve Customer Retention

Questions

Part 1: Data Preparation

1. Decrypt the data
2. Display the first 5 rows of the dataset.

Part 2: Persona Grouping by Demographics

3.Group customers by **Location** (Urban/Rural) and find the **average Annual Income**.

4.Find the **most common Communication Preference** for Urban customers.

5.Group customers by **Technology Usage** and calculate the **average Online Purchase Frequency**.

Part 3: Persona Grouping by Qualitative Data

6.Find the number of customers whose **Goals and Aspirations** is "Better health and fitness".

7.Group customers by **Lifestyle and values** and find the **average Annual Income**.

8.Find the most common **Decision-Making trigger** for customers with **High Technology Usage**.
